Introduction ............................................................................. 1

Introduction to Bulk-Forming Processes
S.L. Semiatin .............................................................. 3
Historical Perspective ...................................................... 3
Classification of Metalworking Processes ..................... 3
Types of Metalworking Equipment .............................. 4
Recent Developments in Bulk Forming ....................... 4
Conclusions and Future Outlook ................................. 7

Design for Deformation Processing
Howard Kahn ..................................................................... 11
Product Design .............................................................. 11
Processing to Meet Product Design Requirements ...... 11
Deformation Processing to Meet Product Design .......................... 12
Specifications ..................................................................... 12
Advantages and Disadvantages of Deformation Processes ...................... 13
Summary ........................................................................ 19

Forging Equipment and Dies ........................................ 21

Hammers and Presses for Forging
Taylan Altun, Munav Sirgancar ........................................ 23
Hammer ................................................................. 23
High-Energy-Rate Forging (HERF) Machines ............. 26
Mechanical Presses .................................................... 27
Hydraulic Presses ...................................................... 30
Screw Presses .......................................................... 33
Multiple-Ram Presses ............................................... 34
Safety ........................................................................ 35

Selection of Forging Equipment
Taylan Altun, Munav Sirgancar ........................................ 36
Process Requirements and Forging Machines .............. 36
Classification and Characterization of Forging Machines ...................................................... 37
Hydraulic Presses ...................................................... 39
Mechanical Presses ................................................... 40
Screw Presses .......................................................... 43
Hammer ................................................................. 45

Dies and Die Materials for Hot Forging
Rajeev Srivastava ........................................................ 47
Open Dies ............................................................... 47
Impression Dies ........................................................ 47
Forging Machine Dies ............................................... 49
Die Materials (Ref 1) ................................................ 49
Factors in the Selection of Die Materials .................... 50
Die Inserts ............................................................... 52
Parting Line ............................................................. 52
Locks and Counterlocks ........................................... 53
Mismatch ................................................................... 54

Draft ........................................................................ 54
Flash ......................................................................... 54
Preform Design .......................................................... 55
Location of Impressions ............................................. 55
Multiple-Pair Dies ....................................................... 55
Dies for Precision Forging ........................................ 56
Fabrication of Impression Dies .................................. 56
Reshinking ............................................................... 57
Cast Dies ................................................................. 57
Heat Treating ........................................................... 58
Trimming and Punching Dies ..................................... 60
Die Life ...................................................................... 60
Safety ......................................................................... 61

Die Wear
Rajeev Srivastava, Sailash Babu, S.L. Semiatin ............. 62
Die Wear and Failure Mechanisms ............................. 62
Materials for Dies ..................................................... 64
Die Wear in Hot Forging Dies ..................................... 70
Surface Treatments and Coatings .............................. 75
Lubricants and their Applications in Forging ............... 84

Candidate Lubricants ................................................... 84
Applications ............................................................. 85

Die Manufacturing and Finishing .............................. 93
High-Speed and Hard Machining ............................... 93
Nontraditional Machining of Dies and Molds ............ 95
Other Methods ........................................................ 96

Forging Processes ..................................................... 97

Open-Die Forging ....................................................... 99
Size and Weight ....................................................... 99
Shapes ....................................................................... 99
Hammers and Presses ............................................ 99
Dies ................................................................. 99
Auxiliary Tools ....................................................... 99
Forging Equipment ................................................ 101
Production and Practice ......................................... 101
Input Structure and Its Elimination .......................... 102
Portability ............................................................. 102
Deformation Modeling ............................................ 102
Examples of Production Practice ............................ 104
Contour Forging ..................................................... 107
Roll Planching ........................................................ 108
Allowances and Tolerances ..................................... 108
Safety ...................................................................... 110

Closed-Die Forging in Hammers and Presses ............ 111
Capabilities of the Process ....................................... 111
Forging Materials ..................................................... 111
Friction and Lubrication in Forging
Classification of Closed-Die Forgings
Shape Complexity in Forging
Design of Blocker (Preform) Dies
Flash Design
Prediction of Forging Pressure
Equipment for Close-Die Forging
Forging Temperatures for Steels
Control of Die Temperature
Trimming
Cooling Practice
Typical Forging Sequences

Hot Upset Forging
J. Richard Douglas

Upset Forging Machines
Selection of Machine Size
Tools
Preparation of Forging Stock
Metal-Saving Techniques
Heating
Die Cooling and Lubrication
Simple Upsetting
Upsetting and Piercing
Offset Upsetting
Double-End Upsetting
Upsetting with Sliding Dies
Upsetting Pipe and Tubing
Electric Upsetting
Other Upsetting Processes

Roll Forging
Prophet K. Chaudhary, Roger Rees
Capabilities
Machines
Roll Dies
Auxiliary Tools
Production and Practice
Modeling and Simulation
Production Examples

Ring Rolling
Robert Bolin
Process Overview
Applications
Ring Slabs and Production Ranges
Machines
Product and Process Technology
Blank Preparation
Ancillary Operations
Blanking Tools and Work Rolls
Combined Forging and Rolling
Rolled Ring Tolerances and Machining
Allowances
Alternative Processes

Rotary Swaging of Bars and Tubes
Brian Flann, Donald Hack, Albert L. Hoffmanner, Richard Kelly,
Walter Perna
Applicability
Metal Flow During Swaging
Machines
Swaging Dies

Auxiliary Tools
Automated Swaging Machines
Tube Swaging without a Mandrel
Tube Swaging with a Mandrel
Effect of Reduction
Effect of Feed Rate
Effect of Die Taper Angle
Effect of Surface Contaminants
Lubrication
Dimensional Accuracy
Surface Finish
Swaging versus Alternative Processes
Swaging Combined with Other Processes
Special Applications
Hot Swaging
Material Response
Noise Suppression
Swaging Problems and Solutions

Radial Forging
H. W. Stock

Types of Radial Forging
Advantages of Radial Forging Versus Open-Die Cogging
Disadvantages of Radial Forging versus Open-Die Cogging
Forging
Types of Radial Forging Machines
Forging Schedule Development
Forging Dies
Product Shape Control
Example Parts and Processes

Rotary Forging
Applications
Advantages and Limitations
Machines
Dies
Examples
Isotherm and Hot-Die Forging
R.E. Montery, L.G. Housefeld, R.S. Mace

Comparison
History
Process Advantages
Process Disadvantages
Detailed Process Description
Alloy Applications
Process Selection
Process Design
Forging Design Guidelines
Applications of Finite-Element Analysis Modeling to Design
